## P R O F I L E

Passionate full stack developer with a powerful ability to learn and adapt. Excellent communicator with experience in every stage of production application development, as well as project management, marketing, sales, and PR. Thrives in an environment that is constantly seeking newer and better solutions. Fluent in English and Japanese.

I discovered my passion for digital creation in my early childhood. My father, being an IT professional, and seeing my interest in technology, took every opportunity to immerse me in current web technologies. I started out at age 9 doing design and animation with early macromedia software, then later dove into the website world with HTML/CSS/Javascript, web API's, wordpress, SEO, and content creation. My technical skillset and understanding grew with every idea I pursued. Once the idea for the Lake Powell App came at 14, I was able to utilize that base knowledge, and learn the things required to bring the app to life. I love every aspect of the tech industry, and have through experience gained the confidence that I can learn any skill or technology required to get the job done.

## E X P E R I E N C E

2013 • **Technical Project Manager/Developer**  
2017 No Signal Apps / Utah

Remotely managed a team of designers, web developers, and mobile developers to create the Lake Powell Map App, the first ever offline satellite gps map app. Managed all marketing and PR campaigns. The Lake Powell App took a total of 2 years to build, and was used by thousands of Powell visitors, park service rangers, resort employees, and tour guides. Along with being the chief project manager, also designed and developed the app landing page, and managed the SEO, social media, marketing, and PR campaigns. The Lake Powell App has been downloaded over 7,000 times as a paid iOS app, and has been featured on KSLTV, Utah Valley Magazine, Lake Powell Magazine, TripAdvisor.com, and more. (currently undergoing a full rebuild)

• **Property Management Application**

Single page madlibs application using technologies and frameworks including: React, Javascript, HTML/CSS, GIT, and SCSS. Implemented modern CSS styling and javascript lodash.

• **Course Scheduling Single Page Application**

Single page course scheduling application built in javascript using the frameworks React and Redux.

• **Weight Lifting Strength Tracking App (WIP)**

Workout log app that tracks the strength increase of each major muscle group. User logs workouts (weight, reps, movements) and the app tracks and displays progress on a main dashboard and allows users to create custom movements. The app is built using Javascript, React, Redux, mySQL and SCSS.

## O B J E C T I V E

Seeking to leverage my technical skillset and learning ability to grow as a developer while contributing to the team and company success. My goal is to code, and code a lot.

## E X P E R I E N C E

- 2015 • **Sales Representative**  
Vivint Smarthome / Arkansas
- Spent a summer in Little Rock, Arkansas selling Vivint Smarthome products and services door to door. Sold 30 + accounts in a 2 month period.
- 2012 • **Freelance Graphic Designer**  
oDesk (upWork ) / Utah
- 2013
- Worked with small businesses, non-profits, and individuals to design logos, websites, flyers, and other advertising materials remotely through what was then called oDesk.
- 2012 • **Retail Representative/Graphic Designer**  
2nd Track Sports / Orem, Utah
- 2013
- Performed tasks within the shop such as: selling ski and snowboard equipment, overseeing customer equipment rentals, inventory, etc, as well as designing marketing materials and graphics for sales promotions and events.
